Volume 35, Issue Nos. 1–8 (2001)

International Journal for
NUMERICAL METHODS IN FLUIDS

Issue No. 1, 15 January

A numerical study of turbulent flow over a two-dimensional hill: S. G. Sajjadi, T. J. Craft and Y. Feng 1

Arnoldi and Crank-Nicolson methods for integration in time of the transport equation: G. Pini and G. Gambolati 25

Boundary domain integral method for transport phenomena in porous media: R. Jecl, L. Skerget and E. Petresin 39

The hydrodynamic force and torque on a bounded sphere in Poiseuille flow: D. S. Clague and P. J. Cornelius 55

The solution of viscous incompressible jet flows using non-staggered boundary-fitted co-ordinate methods: J. R. Pacheco 71

A stabilized finite element method for the incompressible Navier-Stokes equations using a hierarchical basis: C. H. Whiting and K. E. Jansen 93

Numerical study on effects of check valve closure flow conditions on pressure surges in pumping station with air entrainment: T. S. Lee and L. C. Leow 117

Issue No. 2, 30 January

Handling complex boundaries on a Cartesian grid using surface singularities: J. Revstedt and L. Fuchs 125

A new volume of fluid advection algorithm: the defined donating region scheme: D. J. E. Harvey and D. F. Fletcher 151

Stratified flow over a backward facing step: hybrid solution by integral transforms: R. Ramos, J. S. Perez Guerrero and R. M. Cotta 173

High order schemes for the scalar transport equation: J. A. Hernández 199

Modifications for an explicit algebraic stress model: M. M. Rahman, P. Rautaheimo and T. Siikonen 221

Issue No. 3, 15 February

Adaptive Q-tree Godunov-type scheme for shallow water equations: B. Rogers, M. Fujihara and A. G. L. Borthwick 247

A level set technique applied to unsteady free surface flows: A. Iafrati, A. Di Mascio and E. F. Campana 281

A numerical method for the determination of weakly non-hydrostatic non-linear free surface wave propagation: Z. Li and B. Johns 299

On the efficiency of semi-implicit and semi-Lagrangian spectral methods for the calculation of incompressible flows: C. Xu and R. Pasquetti 319

An implicit numerical algorithm for solving non-hydrostatic free-surface flow problems: M. M. Namin, B. Lin and R. A. Falconer 341

Sensitivity of mesh spacing on simulation macrosegregation during directional solidification of a superalloy: P. K. Sung, D. R. Poirier and S. D. Felicelli 357

Issue No. 4, 28 February

Applications of a higher-order bounded numerical scheme to turbulent flows: B. Song, G. R. Liu and R. S. Amano 371

A multigrid method with higher-order discretization schemes: A. A. Varonos and G. C. Bergeles 395

Control of vortex shedding behind circular cylinder for flows at low Reynolds numbers: S. Mittal and A. Raghuvanshi 421

A Boltzmann based model for open channel flows: M. S. Ghidaoui, J. Q. Deng, W. G. Gray and K. Xu 449

Issue No. 5, 15 March

A non-iterative numerical approach for two-dimensional viscous flow problems governed by the Falkner-Skan equation: Shi-Jun Liao 495

Prediction of unobstructed flow for co-rotating multi-disk drive in an enclosure: E. Y. K. Ng and Z. Y. Liu 519

Numerical solution of three-dimensional Navier-Stokes equations by a velocity-vorticity method: Chung Ho Liu 533

Numerical simulation of White-Metzner fluid in a 4:1 contraction: S. Raghay and A. Hakim 559

The two-dimensional streamline upwind scheme for the convection-reaction equation: T. W. H. Sheu and H. Y. Shiah 575

Direct numerical simulation of wall turbulent flows with microbubbles: A. Kanai and H. Miyata 593

Issue No. 6, 30 March

Three-dimensional coarse large-eddy simulations of the flow above two-dimensional sinusoidal waves: M. V. Salvetti, R. Damiani and F. Beux 617

Computation of two-dimensional flows past ram-air parachutes: S. Mittal, P. Saxena and A. Singh 643

Two-dimensional, unstructured mesh generation for tidal models: S. C. Hagen, J. J. Westerink, R. L. Kolar and O. Horstmann 669

Implicit time accurate simulation of unsteady flow: R. van Buuren, H. Kuerten and B. J. Geurts 687

A convergence accelerator of a linear system of equations based upon the power method: A. Dagan 721

Issue No. 7, 15 April

A fictitious domain/mortar element method for fluid–structure interaction: F. P. T. Baaijens 743

Computational modelling of flow around a circular cylinder in sub-critical flow regime with various turbulence models: M. Tutar and A. E. Holdø 763

On the accuracy of one-dimensional models of steady converging/diverging open channel flows: M. E. Hubbard 785

Parallelizing FLITE3D—a multigrid finite element Euler solver: Y. F. Hu, D. R. Emerson, M. Ashworth, K. C. F. Maguire and R. J. Blake 809

A fully non-linear model for three-dimensional overturning waves over an arbitrary bottom: S. T. Grilli, P. Guyenne and F. Dias 829

Issue No. 8, 30 April

A spectral element shallow water model on spherical geodesic grids: F. X. Giraldo . . . 869

Positivity preserving pointwise implicit schemes with application to turbulent compressible flat plate flow: L. W. J. Lanerolle 903

Identification of local extinction topology in axisymmetric bluff-body diffusion flames with a reactedness-mixture fraction presumed probability density function model: P. Koutmos and P. Marazioti 939

A front-capture scheme for the simulation of homogeneous and particle-laden gravity currents: W. A. Engblom, L. W. Lake and R. T. Bonnecaze 961
